

Four matched profiles expose joint beam-closing surplus.

Matched physical profiles

00 Both stay

10 1 moves

01 2 moves

11 Both move

Same sealed anchor and keyed fading draw
Only the two member actions differ

From local terms to an exact coalition residual

Local $\ell_i = B_i(x^i) - B_i(x^0) - \lambda [E(x^i) - E(x^0)]$

External $e_i = \sum_{u \neq i} [\textcolor{red}{\iota} B_u(x^i) - B_u(x^0)] \textcolor{red}{\iota}$

Joint $\Psi = \Psi_B - \lambda \Psi_E$

Target $z_{3,i} = e_i + \frac{\Psi}{2}$

Identity $\sum_{i=1}^2 [\textcolor{red}{\iota} \ell_i + z_{3,i}] = G(x^c) - G(x^0) \textcolor{red}{\iota}$

Teacher only: four profiles are offline. Runtime keeps one masked argmax and no coordinator.
